

CMCC is a scientific research center on **climate change** and its interactions with the **environment**, **the society**, the **world of business**, and **policy makers**.

Our work aims to stimulate **sustainable growth**, **protect the environment**, and develop strategies for the **adaptation and mitigation** of climate change.

We produce scientific data and information to **understand climate change in progress** and to analyze **current impacts** on ecosystems and socio-economic systems.

We create scenarios and simulations to study the **climate of the future** and develop projects and activities in the service of the **public administration**, of the **productive activities** and the **realities of non-profit** whose activities are sensitive to the impacts of climate change.

CMCC is a non-profit research center established in 2005, with the financial support of the Ministry of Education, University and Research (MIUR), the Italian Ministry for the Environment, Land and Sea (MoE), the Ministry of Agriculture and Forestry (MIPAF) and the Ministry of Finance (MEF), with funding from the Special Integrative Fund for Research (FISR).

Cutting-edge research to investigate and to address the Climate Change Challenge

Science
Environment
Sustainability
Economics
Policy
Society

All our activities are aimed at providing **scientific, reliable, timely** and **rigorous** results

We carry out activities that inform and facilitate dialogue between **scientists, policy makers, businesses, non-profit organizations, media** and **public opinion**

Our partners are **national governments, local authorities, businesses, research centers, international and multilateral institutions, non-profits** and **NGOs**

Scientific integrity, independence and **impartiality** are among the core values that underpin our work

An interdisciplinary network for a unique reality within the international landscape.

The research carried out at CMCC is based on integrated collaboration among multidisciplinary skills that allow to study climate change and its impacts on agriculture and ecosystems, oceans and coasts, the biosphere, manufacturing and financial activities.

Integration of technology resources of the latest generation

The CMCC Supercomputing Center, an infrastructure among the most important and powerful in the world among those dedicated exclusively to the study of the climate, is the technological heart of our activities and allows the realization of cutting-edge and innovative research.

Experts at the top of global research

CMCC draws on the expertise of scientists and researchers whose authority is recognized in the international community of research on climate change.

Publications

We write scientific articles for international journals, we publish a digital magazine, periodical newsletters and much more. Our presence on the web and in the media helps us to talk to a vast audience that is interested in staying current on issues related to climate change and on the international debate.

Events

Seminars, workshops and conferences: the events that we organize throughout the country and in international circumstances are valuable opportunities to maintain a lively dialogue with our stakeholders.

Education

Our Graduate Programs, Summer and Winter Schools have achieved a remarkable reputation in the world scientific community, thanks to their international scope and to the collaboration with some of the most outstanding Research Centers on climate studies.

Communication

Blog, web and mobile applications make our presence in digital communication a constant and current point of reference on public debate on climate change.
