

Have you got
an **electrical
engineering**
degree?
Find out more.

Junior electrical systems engineer

Provides assistance in the design of overall electrical integrity and ensures compliance with international standards and company guidelines. Also assists in the selection of the best technical and economic solutions for power systems products. Their activity takes place within an international and stimulating environment, which enhances the contribution of the individual.

Junior automation & instrument engineer

Provides support within the maintenance engineering staff for the preparation and execution of instrumentation activities. Also collaborates in the creation of resources required to accomplish the work (labor, materials, tools, contractors). Team spirit and sharing skills are crucial for those working in this field.

Junior HSEQ engineer

Carries out technical audits, including verification of compliance with the 231 control standards on HSE and Health, and checks on regulatory compliance. Also carries out reporting activities, with reference to the acquisition of the results of technical audits and related action plans. Works with their team to ensure safety, a value that has always been at the forefront for Eni.

Junior electrical maintenance engineer

Verifies the reliability of process plant equipment, through the application of national and international methodologies and technical standards. Also prepares the necessary documentation for the purchase and procurement of new equipment. Operates in an international environment where people are encouraged to share skills and know-how.
