

Have you got  
a **mechanical  
engineering**  
degree?  
Find out more.

#### Junior construction engineer

Ensures that construction activities are carried out according to budget and project schedule, bringing to attention any deviations and proposing appropriate solutions. Also defines the construction plan, the sequence of activities and the methodologies. Operates in a professional context that focuses on human capital as a key element for business development.

#### Junior mechanical equipment engineer

Provides support for the coordination, execution and control of engineering activities related to machines and packages in accordance with contractual and design requirements, in compliance with the assigned budget, the job program and quality standards. Works in synergy with the work team, within which the contribution of each member is valued.

#### Smart mobility initiatives junior developer

Carries out marketing and communication activities related to smart mobility, providing competent input for the analysis, design and updating of front-end systems. Defines the new commercial formats and the relative initiatives operating in synergy with the competent company units. Their professional contribution is crucial for the development of a new Eni that is more and more innovative and sustainable.

#### Supply chain analyst

Performs activities related to raw material procurement and bio-refinery scheduling. Studies and investigates the complexity of the raw materials supply chain, with the aim of controlling performance and improving efficiency. Tackles new challenges and brings expertise to bear in a rapidly changing environment.

#### Junior mechanical maintenance engineer

Verifies the reliability of process plant equipment, through the application of national and international methodologies and technical standards. Also prepares the necessary documentation for the purchase and procurement of new equipment, in collaboration with their work team.

#### Asset integrity analyst

Manages the company's assets in compliance with Eni's values, guaranteeing the safety, integrity and reliability of the asset from the design phases to operational conclusion. Acts in terms of efficiency and effectiveness to ensure an increasingly sustainable future.

#### Junior R&D engineer

Designs, plans and follows up the activities related to Eni projects in collaboration with the internal and external multidisciplinary work team. Assists in the drafting of project specifications in collaboration with laboratories and research organizations: multicultural contexts that recognize diversity as an added value.
