graduate?**
Find out more.

Production plant operator

Ensures the correct execution of maintenance activities, from the plant preparation phases to the closure of the work permit, verifying the implementation of safety procedures and the quality of the work performed, aspects that are at the heart of Eni's mission and long-term commitment.

Drilling operator

Provides support in managing the operational phases of drilling onshore and offshore rigs. Participates in the dismantling and relocation operations of the rig in compliance with procedures related to site safety regulations. Operates in an international and stimulating environment.

Well area operator

Acquires and evaluates well geology data during drilling activity, also evaluating hydrocarbon occurrences. Prepares the daily well geology report and the specific evaluation reports of the geological formations crossed. During their activity they interface with interdisciplinary teams from which they can learn and grow professionally.

Production chemist

Carries out analysis and laboratory tests related to the chemical-physical characterization of crude oils and finished fuels. Is also in charge of entering the results into the appropriate systems and producing a report. Works in an international and challenging environment.

Geochemist

Conducts analysis and experiments using both conventional analytical techniques (mass spectrometry, liquid chromatography, electrophoresis) and advanced instrumentation. Operates in compliance with the objectives of safety and sustainability that are at the heart of Eni's mission and its commitment to a low carbon future.

Junior researcher environmental technologies

Conducts analysis and experiments in the field of environmental technologies, using both conventional and advanced analytical techniques such as two-dimensional chromatography. Operates in a challenging environment that recognizes the professional contributions of each team member.

Process operator

Performs control operations on equipment necessary for the operation of process plants within their competence. Intervenes in the face of critical situations by carrying out the necessary manoeuvres, in compliance with safety procedures and provisions. Performs their duties by collaborating within dynamic and inclusive teams.

Technical laboratory analyst

Conducts analytical tests and experiments related to refinery products, also responsible for entering results into information systems. Receives stimuli from interdisciplinary contexts that allow continuous learning and the acquisition of transversal skills.

Sales operator

Manages the assigned customer package, dealing with sales contract negotiations according to pre-established standards; finalizes the sale and ensures the successful completion of the supply. Is also responsible for researching new customers and analyzing the methods adopted by competitors. Initiative and innovation are key elements for this professional role.

Green refinery process operator

Monitors and controls the equipment necessary to run the process plants in the bio-refineries, operating in compliance with the values of environmental sustainability which are at the heart of Eni's commitment to a low carbon future. Intervenes in critical situations by implementing the necessary actions, in compliance with safety procedures and regulations.
